

TRI-MIST

CUSTOMER TESTIMONY

Highland Products Corp, known industry-wide for their technical expertise and cutting edge machining technology, has excelled in their highly competitive industry. Their commitment to "customer satisfaction and the highest quality product" can only be achieved by having a professional, highly trained staff and world -class equipment.

Highland Products installed high-pressure pumps on their machine tools three years ago to improve their processes. This improvement caused an environmental problem that had to be addressed. In an attempt to capture the mist in their facility they purchased media units from a local air cleaner distributor. These units could not keep up with the mist that was generated from their machine tools.

Having spent over \$40,000

to buy and install the original media units that did not work, they decided to find a different solution. They investigated many different options, talked

Before Tri-Mist

with many people in industry, and selected the Tri-Mist 500.

They have purchased 17 units during the past 18 months. They are not only are a Tri-Mist 500 customer, but they have been an outspoken advocate of the Tri-Mist 500. They have given several unsolicited referrals, one of

which purchased 10 units.

They were looking for a mist collector that would offer high efficiency, they are delighted with the cosmetic difference the machine mountable Tri-Mist 500 made. There is nothing like a satisfied customer!
